Professional Summary

Java Backend Engineer with 5 years of experience designing and modernizing distributed backend systems across telecom and government platforms. Experienced in Java 8–21, Spring Boot, Kafka/Spark, event-driven microservices, REST APIs, database optimization, and production troubleshooting for high-volume systems.

Skills

Languages & Backend: Java (8/11/17/21), SQL, Spring Boot 2/3, Spring MVC, Spring Cloud, Hibernate/JPA, REST APIs

Architecture, Messaging & Streaming: Microservices, Distributed Systems, Event-Driven Architecture, Apache Kafka, Apache Spark 3, High-Availability Design, Idempotency Patterns

Databases & Cloud: IBM DB2, MySQL, Apache Cassandra, AWS (EC2, S3)

DevOps & Observability: Red Hat OpenShift, Kubernetes, Docker, Jenkins, Maven, SonarQube, Artifactory, Git/GitHub, Grafana, Kibana (ELK), Prometheus

Testing & Engineering: JUnit, Mockito, Root Cause Analysis (RCA), On-Call Incident Management

Professional Experience

Infosys Ltd. November 2025 – Present

Senior Associate Consultant | Income Tax Department, Government of India | TDS-CPC *Noida, India*

Tech Stack: Java 21, Spring Boot 3, Apache Kafka, IBM DB2, JPA/Hibernate, Red Hat OpenShift, JUnit, Mockito

- Designed and developed **25+ Spring Boot REST APIs** for TDS-CPC correction workflows, translating complex tax-processing requirements into modular backend services.
- Designed event-driven workflows using **Apache Kafka** for asynchronous correction processing, decoupling user-facing APIs from downstream backend services.
- Designed JPA/Hibernate domain models and optimized IBM DB2 query flows for correction-case lifecycles while maintaining relationships and data consistency with original orders.
- Implemented TDS computation and regulatory business rules across multiple assessment years, backed by JUnit/Mockito regression coverage.
- Deployed Java 21 / Spring Boot 3 microservices on **Red Hat OpenShift** through CI/CD pipelines and supported production troubleshooting and RCA.

Rakuten Symphony India Pvt. Ltd. October 2021 – October 2025

Software Engineer | Telecom OSS – Service Assurance Platform *Bengaluru, India*

Tech Stack: Java 8/11/17/21, Spring Boot 2/3, Apache Kafka, Apache Spark 3, MySQL, Cassandra, Kubernetes, AWS, JUnit, Mockito

- Built backend integrations supporting **200+ network devices** across distributed, multivendor telecom environments.
- Designed a configurable **event-correlation engine** for LTE, 5G, and multivendor EMS environments, transforming raw alarms and degradation events into actionable incident profiles.
- Improved Apache Spark processing performance by **40%** through code-level optimization and efficient data-distribution strategies.
- Developed Kafka-based incident-processing workflows that improved system performance by **30%**, consolidating redundant incidents from multiple network sources.
- Built reliable **Kafka event-processing workflows** with at-least-once delivery, key-based partitioning, and idempotent handling of duplicate and replayed events.
- Contributed to incident-management capabilities that reduced average service-restoration time by **20%** while improving visibility into network health and performance.
- Modernized services from **Java 8 to Java 17/21** and Spring Boot 3 while maintaining **90%+ unit-test coverage**; handled L3 troubleshooting using Grafana and Kibana.
- Mentored and onboarded **2–3 engineering interns** through architecture walkthroughs, code reviews, debugging sessions, and pull-request feedback.

Certifications

GitHub Copilot Certified Professional (GH-300) — GitHub / Microsoft September 2026

Claude Certified Developer – Foundations — Anthropic September 2026

Education

IES College of Technology (RGPV) 2016 – 2020

Bachelor of Engineering (B.E.) in Computer Science & Engineering Bhopal, India
