PROFESSIONAL SUMMARY

Java Backend Engineer with 4+ years of experience designing and owning distributed, event-driven systems across carrier-grade telecom and national government tax platforms. Builds Spring Boot services, Kafka-based messaging, Spark pipelines, and Kubernetes deployments, with end-to-end ownership across API design, data modelling, testing, CI/CD, and production support.

TECHNICAL SKILLS

Languages: Java, SQL

Backend & Architecture: Spring Boot, Spring MVC, Hibernate/JPA, REST APIs, Microservices, Distributed Systems, Event-Driven Architecture

Databases: IBM DB2, MySQL, Apache Cassandra

Messaging & Streaming: Apache Kafka, Apache Spark (Batch & Streaming)

Containers & Orchestration: Docker, Kubernetes

Cloud & Platform: AWS (EC2, S3), Red Hat OpenShift

DevOps & CI/CD: Red Hat OpenShift CI/CD Pipelines, Jenkins, Artifactory, Maven, Git, GitHub

Testing & Quality: JUnit, Postman, SonarQube

Tools & Practices: Jira, Confluence, GitHub Copilot, Claude Code

PROFESSIONAL EXPERIENCE

Senior Associate Consultant | Infosys Ltd.

November 2025 – Present

AO Portal, Income Tax Department — Govt. of India (TDS CPC) • Java, Spring Boot, IBM DB2, Kafka, Red Hat CI/CD

- Design and build REST APIs and Spring Boot services with JPA/Hibernate on IBM DB2, writing integrity-safe query logic for a national-scale taxpayer records system handling high-volume financial data.
- Implement and maintain Apache Kafka producer logic in AO Portal services, publishing messages for asynchronous processing by downstream modules.
- Translate frequently changing taxation rules and complex functional requirements into clean, maintainable backend logic, shipping production-ready features every sprint.
- Own build and deployment of backend services through Red Hat OpenShift CI/CD pipelines, ensuring stable and repeatable production releases for a compliance-critical government platform.
- Maintain JUnit test coverage and lead structured peer code reviews with QA and DevOps teams; apply GitHub Copilot and Claude Code throughout the development lifecycle to accelerate delivery and improve code consistency.

Software Engineer | Rakuten Symphony India Pvt. Ltd.

October 2021 – October 2025

Performance Monitor — Telecom OSS (Network Performance & Incident Management) • Java, Spring Boot, Apache Spark, Kafka, MySQL, Cassandra, Kubernetes

- Owned the incident and alarm module of the Performance Monitor platform end-to-end — real-time detection, correlation, and alerting for network faults and device degradation across a carrier-grade telecom network.
- Built configurable correlation rules for a performance incident management system that proactively flagged degraded network devices before they impacted customers.
- Built a real-time alerting and notification service for network faults and alarms, including cell-down events, enabling operations teams to respond faster to service-impacting incidents.
- Diagnosed and resolved production issues in the incident/alarm pipeline, improving the reliability, accuracy, and timeliness of alerts delivered across the platform.
- Built Spark batch and streaming jobs to publish KPI-based incident alerts to Kafka for downstream monitoring, ticketing, and notification systems, running the service on Kubernetes-based infrastructure for scalable, resilient operation.
- Used Amazon S3 for file and object storage in Amazon EC2-based application environments.

EDUCATION

Bachelor of Engineering, Computer Science & Engineering

IES College of Technology, Bhopal, India

Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV) • 2016 – 2020
